## Transaction Portals: Claredi® Testing and Certification

### Executive Summary

Built on a transaction validation engine created specifically for health care EDI, especially for HIPAA, Claredi Certification was the first comprehensive HIPAA testing solution for those interested in an economical solution to pre-production transaction testing and certification. It is now an integral testing component of the new Ingenix Transaction Portals solution.

- **Cost-effective:** Significantly reduces expenses of system testing and bringing new submitters online through pre-certification
- **Comprehensive:** Edits to all seven WEDI types, every HIPAA transaction, every version, and over 70 code sets
- **High-performance:** Built on a HIPAA-specific EDI analysis engine for unparalleled speed

### Overview

Claredi has long been a leader in HIPAA testing and certification, assisting over 3,500 health care organizations of all types and sizes in achieving HIPAA transaction compliance. As systems change and new HIPAA versions come online, the need for an inexpensive yet thorough solution remains as important as it was in 2003.

**Asking your providers to obtain Claredi Certification saves payers the trouble and resources necessary to walk a provider through the HIPAA minefield.**

#### Cost-effective

When you ask a provider to test and certify in advance of sending transactions to your system, you can have the confidence that they have submitted to thorough scrutiny. More than simply HIPAA standards, we also edit for your payer companion document and your specific business requirements. You don't have to utilize your resources to get them up to speed when they have certified they are ready to do business. When the standards change or a submitter's system changes as they continue to test and certify with Claredi, you can expect a high degree of continued success in exchanging clean and compliant transactions.

#### Comprehensive

This is complete testing. We examine a provider's transactions in relation to all seven WEDI-SNIP types of recommended testing, validate over 70 continually maintained code sets, and test against over 1,000 payer companion documents (if yours is not one of them, it can be—at no cost). We also test against a thorough set of common-sense business edits that we have accumulated through over 20 years of health care EDI experience. With thorough and regular testing, certification becomes an accurate predictor of success in production.

### High-Performance

Our validation is built around Velocedi®, an EDI analysis engine developed specifically for HIPAA. Because it was built exclusively for health care, it has unparalleled speed and accuracy as it takes into account the unique requirements of health care EDI which are not found in other industries.

### Easy to use and understand

Your providers will find testing transactions to be simple through our intuitive, browser-based interface. The process is literally point-and-click simple. Whether you have expert EDI analysts or non-technical staff, the reporting can be geared to the user's knowledge level. Business analysts can obtain plain-English insight into issues that are relevant to them, while more technically oriented EDI staff can see exactly what the problems are, so they can remedy the transaction or adjust their systems as needed.

## Key Features

For pre-production testing, this is the most complete, cost-effective solution available.

- **Pre-qualify providers as they test against your companion document, your requirements built to your specifications**
- **Test all seven types of WEDI-SNIP recommended testing and over 70 continually updated code sets.**
- **Test and certify efficiently through an intuitive interface within a standard Internet browser.**
- **Receive a full range of reports in plain English for non-technical staff and business analysts, or "as technical as you want it" reporting for EDI analysts.**
- **Access the system for an entire year to accommodate system upgrades or the release of updated standards, through an inexpensive annual subscription.**

Claredi Certification by Ingenix is an extraordinarily versatile tool for pre-production transaction testing that can be of significant benefit to your providers and to you as they prepare for submission of production transactions.

### Full Production Validation and Provider Community Testing Portals

If you have a need for a continuous, automated, production validation routing and reporting system, Ingenix Transaction Director provides a number of solutions that have been developed for just such demanding EDI environments. If you are interested in setting up a portal, either co-branded or private labeled, Ingenix Testing Services can help your providers test extensively prior to coming into production.

Call us at 1-800-765-6034 or email [ingenuity@ingenix.com](mailto:ingenuity@ingenix.com) and one of our payer solutions consultants will be happy to assist you in developing the exact system to meet your and your provider's specific needs.
