

## Provider Performance

**INGENIX iQ** is the industry leader in evidence-based provider performance ratings. Allow us to help you deliver cost and quality transparency to your members.

### HOSPITAL PERFORMANCE RATINGS

**INGENIX Hospital Quality** uses CMS MedPAR and state All-payer claims data to create hospital performance ratings in the areas of patient mortality, complications, length of stay, avoidable bed days, cost efficiency, and patient volume. We align our methodology with nationally recognized APU, CMS, HQA, JCAHO, and NQF measures.

### PHYSICIAN PERFORMANCE RATINGS

**INGENIX Physician Quality** delivers the only commercially available evidence-based physician performance ratings in the industry. Most organizations who want to create evidence-based ratings realize that they do not have enough data to confidently do so and don't want to engage in costly methodology creation. Let us remove these obstacles by adding your claims to our 25-million-patient claims database and generate performance ratings based on a physician's actual medical, lab, and Rx claims.

### PERFORMANCE RATINGS DELIVERY

We can deliver provider performance ratings as a data set that you can use for network performance analysis or other purposes – we can also deliver provider performance ratings to your members – seamlessly integrated with our provider search solution, Provider Lookup Online.

PROVIDER RATINGS FOR SPECIALTY: FAMILY PRACTICE	
Number of Patients:	●●●●○ Average
Average Cost of Care:	●●●●○ Average
Quality of Care:	●●●●○ Above Average
TOP CONDITIONS TREATED
